Design and Verification of Microprocessor Systems for High-Assurance Applications

Design and Verification of Microprocessor Systems for High-Assurance Applications

Microprocessors increasingly control and monitor our most critical systems, including automobiles, airliners, medical systems, transportation grids, and defense systems. The relentless march of semiconductor process technology has given engineers exponentially increasing transistor budgets at constant recurring cost. This has encouraged increased functional integration onto a single die, as well as increased architectural sophistication of the functional units themselves. Additionally, design cycle times are decreasing, thus putting increased schedule pressure on engineers. Not surprisingly, this environment has led to a number of uncaught design flaws. Traditional simulation-based design verification has not kept up with the scale or pace of modern microprocessor system design. Formal verification methods offer the promise of improved bug-finding capability, as well as the ability to establish functional correctness of a detailed design relative to a high-level specification. However, widespread use of formal methods has had to await breakthroughs in automated reasoning, integration with engineering design languages and processes, scalability, and usability.

This book presents several breakthrough design and verification techniques that allow these powerful formal methods to be employed in the real world of high-assurance microprocessor system design.

From reader reviews:

Wilma Shay:

Here thing why this kind of Design and Verification of Microprocessor Systems for High-Assurance Applications are different and reputable to be yours. First of all studying a book is good however it depends in the content of it which is the content is as delightful as food or not. Design and Verification of Microprocessor Systems for High-Assurance Applications giving you information deeper including different ways, you can find any guide out there but there is no reserve that similar with Design and Verification of Microprocessor Systems for High-Assurance Applications. It gives you thrill examining journey, its open up your eyes about the thing that will happened in the world which is maybe can be happened around you. You can bring everywhere like in recreation area, café, or even in your means home by train. For anyone who is having difficulties in bringing the published book maybe the form of Design and Verification of Microprocessor Systems for High-Assurance Applications in e-book can be your choice.

Carrie Wilson:

People live in this new morning of lifestyle always attempt to and must have the extra time or they will get large amount of stress from both way of life and work. So , whenever we ask do people have free time, we will say absolutely of course. People is human not a robot. Then we question again, what kind of activity are there when the spare time coming to a person of course your answer may unlimited right. Then ever try this one, reading ebooks. It can be your alternative with spending your spare time, the book you have read is definitely Design and Verification of Microprocessor Systems for High-Assurance Applications.

Betty Bobbitt:

Don't be worry for anyone who is afraid that this book will filled the space in your house, you may have it in e-book approach, more simple and reachable. This specific Design and Verification of Microprocessor Systems for High-Assurance Applications can give you a lot of pals because by you considering this one book you have matter that they don't and make an individual more like an interesting person. That book can be one of a step for you to get success. This book offer you information that possibly your friend doesn't realize, by knowing more than some other make you to be great persons. So , why hesitate? We should have Design and Verification of Microprocessor Systems for High-Assurance Applications.

Cynthia Haynes:

Reading a guide make you to get more knowledge as a result. You can take knowledge and information from the book. Book is created or printed or illustrated from each source this filled update of news. In this particular modern era like now, many ways to get information are available for a person. From media social like newspaper, magazines, science e-book, encyclopedia, reference book, fresh and comic. You can add your knowledge by that book. Do you want to spend your spare time to open your book? Or just searching for the Design and Verification of Microprocessor Systems for High-Assurance Applications when you

essential it?
