Information Science for Materials Discovery and Design (Springer Series in Materials Science)

Information Science for Materials Discovery and Design (Springer Series in Materials Science)

Information Science for Materials Discovery and Design (Springer Series in Materials Science)

This book deals with an information-driven approach to plan materials discovery and design, iterative learning. The authors present contrasting but complementary approaches, such as those based on high throughput calculations, combinatorial experiments or data driven discovery, together with machine-learning methods. Similarly, statistical methods successfully applied in other fields, such as biosciences, are presented. The content spans from materials science to information science to reflect the cross-disciplinary nature of the field. A perspective is presented that offers a paradigm (codesign loop for materials design) to involve iteratively learning from experiments and calculations to develop materials with optimum properties. Such a loop requires the elements of incorporating domain materials knowledge, a database of descriptors (the genes), a surrogate or statistical model developed to predict a given property with uncertainties, performing adaptive experimental design to guide the next experiment or calculation and aspects of high throughput calculations as well as experiments. The book is about manufacturing with the aim to halving the time to discover and design new materials. Accelerating discovery relies on using large databases, computation, and mathematics in the material sciences in a manner similar to the way used to in the Human Genome Initiative. Novel approaches are therefore called to explore the enormous phase space presented by complex materials and processes. To achieve the desired performance gains, a predictive capability is needed to guide experiments and computations in the most fruitful directions by reducing not successful trials. Despite advances in computation and experimental techniques, generating vast arrays of data; without a clear way of linkage to models, the full value of data driven discovery cannot be realized. Hence, along with experimental, theoretical and computational materials science, we need to add a "fourth leg'' to our toolkit to make the "Materials Genome" a reality, the science of Materials Informatics.

From reader reviews:

Randy North:

Within other case, little people like to read book Information Science for Materials Discovery and Design (Springer Series in Materials Science). You can choose the best book if you'd prefer reading a book. Given that we know about how is important some sort of book Information Science for Materials Discovery and Design (Springer Series in Materials Science). You can add knowledge and of course you can around the world by a book. Absolutely right, due to the fact from book you can realize everything! From your country until foreign or abroad you will end up known. About simple matter until wonderful thing you are able to know that. In this era, you can open a book or searching by internet unit. It is called e-book. You can utilize it when you feel bored stiff to go to the library. Let's go through.

Frederick Warren:

This Information Science for Materials Discovery and Design (Springer Series in Materials Science) is brand-new way for you who has fascination to look for some information mainly because it relief your hunger details. Getting deeper you on it getting knowledge more you know or perhaps you who still having bit of digest in reading this Information Science for Materials Discovery and Design (Springer Series in Materials Science) can be the light food for you because the information inside this book is easy to get simply by anyone. These books build itself in the form that is certainly reachable by anyone, yeah I mean in the e-book application form. People who think that in guide form make them feel sleepy even dizzy this book is the answer. So there is no in reading a book especially this one. You can find actually looking for. It should be here for an individual. So , don't miss it! Just read this e-book kind for your better life and knowledge.

Marian Perkins:

Do you like reading a book? Confuse to looking for your best book? Or your book was rare? Why so many issue for the book? But any people feel that they enjoy to get reading. Some people likes studying, not only science book but novel and Information Science for Materials Discovery and Design (Springer Series in Materials Science) as well as others sources were given understanding for you. After you know how the great a book, you feel would like to read more and more. Science publication was created for teacher as well as students especially. Those publications are helping them to increase their knowledge. In some other case, beside science guide, any other book likes Information Science for Materials Discovery and Design (Springer Series in Materials Science) to make your spare time more colorful. Many types of book like this.

Lana Alvis:

Some people said that they feel weary when they reading a e-book. They are directly felt that when they get a half parts of the book. You can choose the particular book Information Science for Materials Discovery and Design (Springer Series in Materials Science) to make your personal reading is interesting. Your current skill

of reading proficiency is developing when you including reading. Try to choose easy book to make you enjoy to read it and mingle the idea about book and examining especially. It is to be initially opinion for you to like to open a book and study it. Beside that the guide Information Science for Materials Discovery and Design (Springer Series in Materials Science) can to be your brand new friend when you're experience alone and confuse using what must you're doing of that time.
