Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball (Applied and Numerical Harmonic Analysis)

Volker Michel

Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball (Applied and Numerical Harmonic Analysis)

Volker Michel

Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball (Applied and Numerical Harmonic Analysis) Volker Michel

Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball focuses on spherical problems as they occur in the geosciences and medical imaging. It comprises the author's lectures on classical approximation methods based on orthogonal polynomials and selected modern tools such as splines and wavelets.

Methods for approximating functions on the real line are treated first, as they provide the foundations for the methods on the sphere and the ball and are useful for the analysis of time-dependent (spherical) problems. The author then examines the transfer of these spherical methods to problems on the ball, such as the modeling of the Earth's or the brain's interior. Specific topics covered include:

* the advantages and disadvantages of Fourier, spline, and wavelet methods

* theory and numerics of orthogonal polynomials on intervals, spheres, and balls

* cubic splines and splines based on reproducing kernels

* multiresolution analysis using wavelets and scaling functions

This textbook is written for students in mathematics, physics, engineering, and the geosciences who have a basic background in analysis and linear algebra. The work may also be suitable as a self-study resource for researchers in the above-mentioned fields.

From reader reviews:

William Todaro:

Now a day those who Living in the era where everything reachable by interact with the internet and the resources inside can be true or not involve people to be aware of each information they get. How people have to be smart in having any information nowadays? Of course the answer then is reading a book. Studying a book can help men and women out of this uncertainty Information mainly this Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball (Applied and Numerical Harmonic Analysis) book because book offers you rich data and knowledge. Of course the knowledge in this book hundred % guarantees there is no doubt in it as you know.

Michael Canton:

Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball (Applied and Numerical Harmonic Analysis) can be one of your beginner books that are good idea. We recommend that straight away because this publication has good vocabulary which could increase your knowledge in language, easy to understand, bit entertaining but still delivering the information. The article author giving his/her effort to get every word into satisfaction arrangement in writing Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball (Applied and Numerical Harmonic Analysis) however doesn't forget the main level, giving the reader the hottest along with based confirm resource data that maybe you can be among it. This great information could drawn you into completely new stage of crucial considering.

Norma Harrell:

You may spend your free time to read this book this guide. This Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball (Applied and Numerical Harmonic Analysis) is simple to deliver you can read it in the park your car, in the beach, train as well as soon. If you did not have much space to bring typically the printed book, you can buy the actual e-book. It is make you easier to read it. You can save the particular book in your smart phone. Thus there are a lot of benefits that you will get when you buy this book.

Christina Almonte:

Beside that Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball (Applied and Numerical Harmonic Analysis) in your phone, it could give you a way to get nearer to the new knowledge or info. The information and the knowledge you might got here is fresh in the oven so don't end up being worry if you feel like an older people live in narrow commune. It is good thing to have Lectures on Constructive Approximation: Fourier, Spline, and Wavelet Methods on the Real Line, the Sphere, and the Ball (Applied and Numerical Harmonic Analysis) because this book offers to

your account readable information. Do you at times have book but you rarely get what it's about. Oh come on, that would not happen if you have this in your hand. The Enjoyable option here cannot be questionable, such as treasuring beautiful island. Use you still want to miss the item? Find this book and read it from currently!
