Molecular Endocrinology (Human Molecular Genetics) Franklyn F. Bolander

Aimed at graduate level courses, this textbook provides students with a solid background in the basics of molecular endocrinology. **Molecular Endocrinology, Second Edition**, summarizes the area and provides an in-depth discussion of the molecular aspects of hormone action, including hormone-receptor interactions, second messenger generation, gene induction, and post-transcriptional control. Thoroughly revised and updated, the **Second Edition** includes new information on growth factors, hematopoietic-immune factors, nonclassical hormones, receptors, transduction, transcriptional regulation, as well as other relevant topics. Incorporating an abundance of new information, this text retains the self-contained, focused, and easily readable style of the First Edition. Professionals in related fields will also find this book to be a helpful summary and general reference source.
