Floods in a Megacity: Geospatial Techniques in Assessing Hazards, Risk and Vulnerability (Springer Geography) Ashraf Dewan

Flooding is one of the most devastating natural hazards in the world. Available records suggest that both flood frequency and severity are on the rise and this is likely to worsen in the context of climate change. As population, infrastructure and poverty grow rapidly in developing countries, particularly in urban agglomerations of 10 million people or more, floods could cause widespread devastation, economic damage and loss of life. Assessment of vulnerability and risk from naturally occurring phenomena is therefore imperative in order to achieve urban sustainability.

This book uses geospatial techniques to evaluate hazards, risk and vulnerability at a metropolitan scale in a data-scarce country. An empirical study was performed using remote sensing, GIS and census data. This research offers a new approach to mapping population, infrastructures and communities at risk which can greatly contribute to the deeper understanding of flood disasters in a rapidly expanding megacity. Examples shown in this book are from Dhaka Megacity, however, the techniques and methods can easily be implemented in medium to large cities of similar characteristics.

The book is essential reading for hazard researchers, geospatial scientists, disaster management professionals, geographers, urban planners, and social scientists.

Ashraf M. Dewan is currently a Lecturer in the Department of Spatial Sciences at Curtin University, Western Australia (on leave from his substantive position as Associate Professor in the Geography & Environment Department at the University of Dhaka, Bangladesh).

From reader reviews:

Victor Kohlmeier:

Do you have favorite book? In case you have, what is your favorite's book? Publication is very important thing for us to know everything in the world. Each e-book has different aim or even goal; it means that guide has different type. Some people sense enjoy to spend their the perfect time to read a book. These are reading whatever they take because their hobby is reading a book. How about the person who don't like looking at a book? Sometime, particular person feel need book after they found difficult problem or maybe exercise. Well, probably you should have this Floods in a Megacity: Geospatial Techniques in Assessing Hazards, Risk and Vulnerability (Springer Geography).

Jimmy Borrelli:

Within this era which is the greater particular person or who has ability to do something more are more important than other. Do you want to become among it? It is just simple solution to have that. What you should do is just spending your time very little but quite enough to possess a look at some books. One of many books in the top list in your reading list is definitely Floods in a Megacity: Geospatial Techniques in Assessing Hazards, Risk and Vulnerability (Springer Geography). This book that is certainly qualified as The Hungry Slopes can get you closer in turning out to be precious person. By looking right up and review this publication you can get many advantages.

Julie Kappel:

What is your hobby? Have you heard that will question when you got students? We believe that that problem was given by teacher on their students. Many kinds of hobby, Everybody has different hobby. Therefore you know that little person including reading or as examining become their hobby. You have to know that reading is very important as well as book as to be the thing. Book is important thing to add you knowledge, except your own personal teacher or lecturer. You find good news or update about something by book. Different categories of books that can you choose to use be your object. One of them is actually Floods in a Megacity: Geospatial Techniques in Assessing Hazards, Risk and Vulnerability (Springer Geography).

Shawn Hernandez:

Some individuals said that they feel uninterested when they reading a publication. They are directly felt it when they get a half areas of the book. You can choose often the book Floods in a Megacity: Geospatial Techniques in Assessing Hazards, Risk and Vulnerability (Springer Geography) to make your own reading is interesting. Your personal skill of reading talent is developing when you such as reading. Try to choose basic book to make you enjoy to study it and mingle the sensation about book and looking at especially. It is to be first opinion for you to like to open up a book and study it. Beside that the publication Floods in a Megacity: Geospatial Techniques in Assessing Hazards, Risk and Vulnerability (Springer Geography) can to be a newly purchased friend when you're truly feel alone and confuse with the information must you're doing of

this time.
