Charles Darwin

On the Origin of the Species and The Voyage of the Beagle Charles Darwin

From 1831-1836 Charles Darwin embarked on a journey aboard the H.M.S. Beagle that eventually led to him to the famous conclusions he drew in *Origins of Species by Means of Natural Selection*. As the ship's naturalist, he made exhaustive observations of the geology and natural history of the region and collected numerous samples. *The Voyage of the Beagle* is an account of his activities as well as of his hypotheses on certain scientific phenomena. *On the Origin of Species* revolutionized natural science. It introduces the concepts of adaptation and natural selection, and explores the topic of evolution, which altered our understanding of the world.
